

Request for Quotations for a complete Rain Station (Rain gauges and Fence)

About DAI

DAI is an international development company. For more than 45 years, we have worked on the frontlines of international development, tackling fundamental social and economic development problems caused by inefficient markets, ineffective governance, and instability. Currently, DAI is delivering results that matter in some 80 countries. Our development solutions turn ideas into impact by bringing together fresh combinations of expertise and innovation across multiple disciplines. Our clients include international development agencies, international lending institutions, private corporations and philanthropies, and national governments.

Objective of the Programme

DAI was awarded the Scottish Government funded Climate Just Communities – Malawi (CJC Malawi) and is implementing with four Tier 1 partners namely Water Witness International, Link Education International, OXFAM Great Britain, and International Institute for Environment Development and their Tier 2 partners which include CADECOM Karonga Diocese, Organization for Sustainable Socio–Economic Development Initiative (OSSEDI), Circle for Integrated Community Development (CICOD), World Relief Malawi (WRM), Link Community Development Malawi (LCDM), Evangelical Lutheran Development Services (ELDS), Water Witness Malawi (WWM) and Civil Society Network on Climate Change (CISONECC), Oxfam Malawi and Churches Action in Relief and Development (CARD), The Department of Climate Change and Metrological Services (DCCMS). These Tier 2 partners are operating in Chikwawa, Neno, Karonga, Phalombe, Zomba, Machinga, Salima¹ and national level where CISONECC advocacy activities are being implemented. The CJC is inherently linked to wider Scottish Government policies including gender and international development with embed principles under the Gender Equality Act 2014 and OECD-DAC Gender Equality Policy Marker. CJC responds to these policies by empowering the most marginalised groups. Based on local contextual analysis, we examine structures, institutions, formal and informal rules to understand how these intersect and influence practices and norms, particularly those which disadvantage certain groups. We aim to understand unequal power relations and inequalities experienced by individuals based on their social identities.
