WEEKLY WEATHER STATEMENT 24TH TO 30TH NOVEMBER, 2025

SUMMARY OF WEATHER AHEAD

From tomorrow, Monday, 24th November 2025, a slight increase in temperatures is expected and skies are expected to be partly cloudy over most area, accompanied by isolated thunderstorms and rains, with heavier episodes anticipated in some few areas. Figure 1 to the right illustrates the expected total rainfall amount nationwide, highlighting localized higher values over the southern region. The amounts will likely be less than the rainfall received the past week.

Moderate winds are likely at times throughout the week, particularly in northern areas.

WEATHER DURING PAST WEEK

Windy, cloudy, and mild conditions prevailed over the past week, accompanied by thunderstorms and rainfall, with some areas experiencing locally heavy downpours. The highest recorded rainfall was reported from Vua in Nkhata-Bay - 87.6 mm on 21st November 2025.

Figure 2 illustrates the highest rainfall amounts reported across the country during the past week.

WEEKLY ADVISORIES:

- Due to heavy rains, threat of flash flooding is high.
 Therefore, clear drains and water channels around your home to improve water flow.
- Thunderstorms: Seek shelter in safe places
- Moderate Winds: Make sure houses are strong enough to with stand these winds.
